AMENDMENTS TO THE CLAIMS:

This listing of the claims will replace all prior versions, and listings, of the claims in this application.

Listing of Claims:

1. (Previously Presented) A system for displaying an image captured by a sensor array, the system comprising:

a buffer for storing an output from a first plurality of sensors of a sensor array;

means for processing the stored output to create an image corresponding to an output from a plurality of sensors within a first area of the sensor array, wherein the plurality of sensors within the first area of the sensor array are a subset of the first plurality of sensors;

means for displaying the image;

a memory for receiving and storing the image; and

means for changing the image displayed by translating the first area.

- 2. (Canceled).
- 3. (Canceled).
- 4. (Canceled).
- 5. (Canceled).
- 6. (Original) A system as claimed in claim 1, comprising a display for displaying the image corresponding to the output from the plurality of sensors within the first area of the sensor array.
- 7. (Original) A system as claimed in claim 1, comprising a user input device for controlling the translation of the first area within the sensor array.

Art Unit:

2878

8. (Original) A system as claimed in claim 7, wherein the user input device controls translation in a first direction and, independent translation in a second direction, substantially perpendicular to the first direction.

9. (Original) A system as claimed in anyone of claims 7, wherein the first user input device is additionally arranged to resize the first area.

10. (Original) A system as claimed in claim 9, wherein the user input device is arranged to simultaneously resize and translate the first area.

11. (Original) A system as claimed in claim 1, wherein the means for displaying an image comprises a processor.

12. (Previously Presented) A method for displaying an image, the method comprising:

temporarily storing an output from a first plurality of sensors of a sensor array;

processing the stored output to create an image corresponding to an output from a plurality of sensors within a first area of the sensor array, wherein the plurality of sensors within the first area of the sensor array are a subset of the first plurality of sensors;

displaying the image corresponding to an output from the plurality of sensors within the first area of the sensor array;

receiving and storing the image in a memory; and

displaying a different image in response to a user input that is equivalent to translating the first area within the sensor array.

13. (Previously Presented) A system for displaying an image, the system comprising:

a buffer for storing an output from a first plurality of sensors of a sensor comprising an N x M array of light sensors,

a processor for processing the stored output to create an image comprising an $n \times m$ array of pixels corresponding to an output from an $n \times m$ subset of the $N \times M$ array of light sensors, wherein the $n \times m$ subset of light sensors are a subset of the first plurality of sensors, and for

controlling a display to display the image, wherein the corresponding n x m subset is changeable in response to a user input to vary the image for display; and

a memory for receiving and storing the image.

14. (Previously Presented) A system as in claim 1, wherein the system is incorporated in a digital camera.

15. (Previously Presented) A system as in claim 10, wherein the system is incorporated in a digital camera.

16. (Previously Presented) A system as in claim 15, wherein said resizing corresponds to a digital zoom.

17. (Previously Presented) A system as in claim 16, wherein said translating of said first area is accomplished by a command.

18. (Previously Presented) A system as in claim 17, wherein resizing forms an image that is larger than said image created by said processing means.

19. (Previously Presented) A system as in claim 17, wherein resizing forms an image that is smaller than said image created by said processing means.

20. (Previously Presented) A system as in claim 17, comprising a memory for receiving and storing the image.

21. (Previously Presented) A system as in claim 20, wherein the memory is a built-in permanent memory.

22. (Previously Presented) A system as in claim 20, wherein the memory is a removable memory.

Art Unit:

2878

- 23. (Previously Presented) A system as claimed in claim 1, wherein the memory is for receiving and storing the output from the first plurality of sensors of the sensor array.
- 24. (Previously Presented) A system as claimed in claim 7, wherein the user input device is connected to the means for processing via a wireless link.
- 25. (Previously Presented) A system as in claim 1, wherein the system is incorporated in a portable handheld device.
- 26. (Previously Presented) A system as in claim 25, wherein the portable handheld device is a mobile phone.
- 27. (Previously Presented) A system as in claim 25, wherein the portable handheld device is a personal digital assistant.
- 28. (Previously Presented) A system as in claim 22, wherein the removable memory is a secure digital card.
- 29. (Previously Presented) A system as in claim 22, wherein the removable memory is a microdrive.
